

# Business Process Modelling

Optimizing Claims Workflow using BPMN, 7PMG, and Process Automation

## Project Overview

This project focused on analyzing, modeling, and redesigning the **car insurance claim registration process** for a fictional insurance firm. The goal was to enhance efficiency, customer satisfaction, and automation readiness.

We followed **BPMN best practices**, applied **7PMG guidelines**, calculated process **cycle times**, and implemented redesign strategies using Reijers & Mansar's techniques. Finally, we proposed automation through a five-step framework.

1 / 7

## Contributors

- **Tamim Hasan**
- **Sherina Ruth Kuntla**
- **Ezekiel Jesudoss Samson Kamalanathan**

## My Contributions

- Redesigned the claims process with **exception handling** for withdrawal requests
- Ensured **7PMG** compliance in BPMN diagrams
- Calculated **cycle time estimations** for two core sub-processes
- Led part of the **automation strategy** using a five-step BPM method
- Refined activity naming, flow structures, and gateway logic

## Tools & Methodologies

- **BPMN (Business Process Model and Notation)**
- **7PMG (Seven Process Modeling Guidelines)**
- **Devil's Quadrangle Analysis**
- **Process Redesign Heuristics (Reijers & Mansar)**
- **Automation Framework (5-step method)**
