

Electric Vehicle Adoption Analytics

A county-level EV trend analysis for the Washington State Department of Licensing using Power BI, Tableau, and Google Colab.

Project Overview

This Business Intelligence project was developed for the **Washington State Department of Licensing** to examine electric vehicle (EV) population trends across U.S. counties. The analysis used a real-world dataset with over 18,000 records and aimed to support sustainable policy-making through data-driven insights and interactive dashboards.

Here are some snapshots from our dashboards–

1 / 15

Objectives

- Analyze EV adoption patterns across counties

- Forecast future EV registration trends
- Identify infrastructure needs (e.g., charging stations)
- Deliver actionable insights to policymakers, entrepreneurs, and the public
- Promote sustainable transportation through data transparency

Contributors

- **Tamim Hasan**
- **Yash Satishkumar Raja**

- **Rashmika Manawadu**
- **Sajith Nipuna Karunarathna Sella Hannadige**

My Contributions

- Cleaned and transformed 18,769+ data records using **Google Colab**
- Created 4 interactive dashboards in **Power BI** and **Tableau**
- Built a forecast model projecting **15% increase in EVs over 5 years**
- Delivered targeted insights for **executives, policymakers, and environmental orgs**

Tools & Technologies

- **Power BI** – Dashboard development & forecasting
- **Tableau** – Data visualization
- **Google Colab** – Data cleaning & transformation
- **Microsoft Excel** – Data formatting & calculations
- **Dataset** – EV Population Size History by County (18,769 records)
